

# TSC LIFE

# MISTRAL-AIR®

**Mistral-Air® warming blankets are designed with simplicity at its core. Maintaining a patient's normothermia requires an effective and efficient convective solution.**

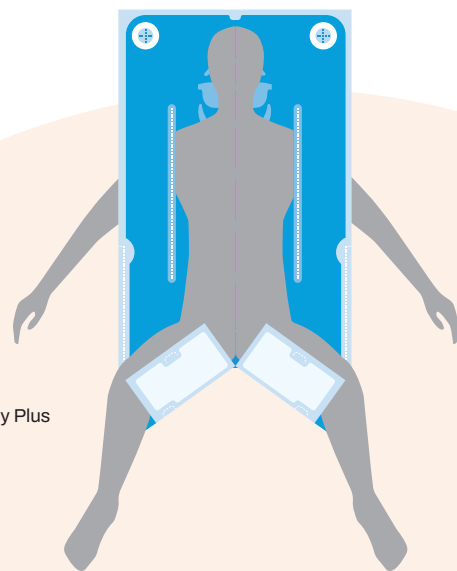

## **New Underbody Lithotomy Blankets**

Our Mistral-Air Warming Blanket Portfolio is expanding. Available in both the Plus and Premium Blanket configuration, TSC Life has designed the Underbody Lithotomy Blankets to support your warming needs for gynecological, urological, colorectal and pelvic procedures.

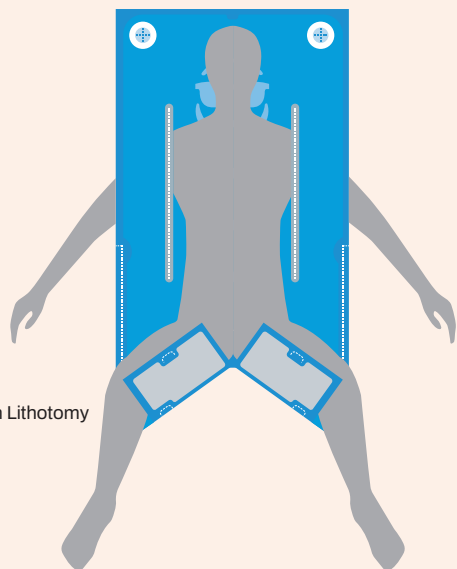

The Mistral-Air Underbody Lithotomy Blankets increase the warmed surface by warming the underbody and the upper legs, to support you in keeping your patient normothermic and comfortable during the procedure. In a recent study, in which a underbody blanket was compared to an overbody blanket for patients in lithotomy position, the underbody blanket showed statistically significant better warming and a reduction in postoperative length of stay.<sup>1</sup>

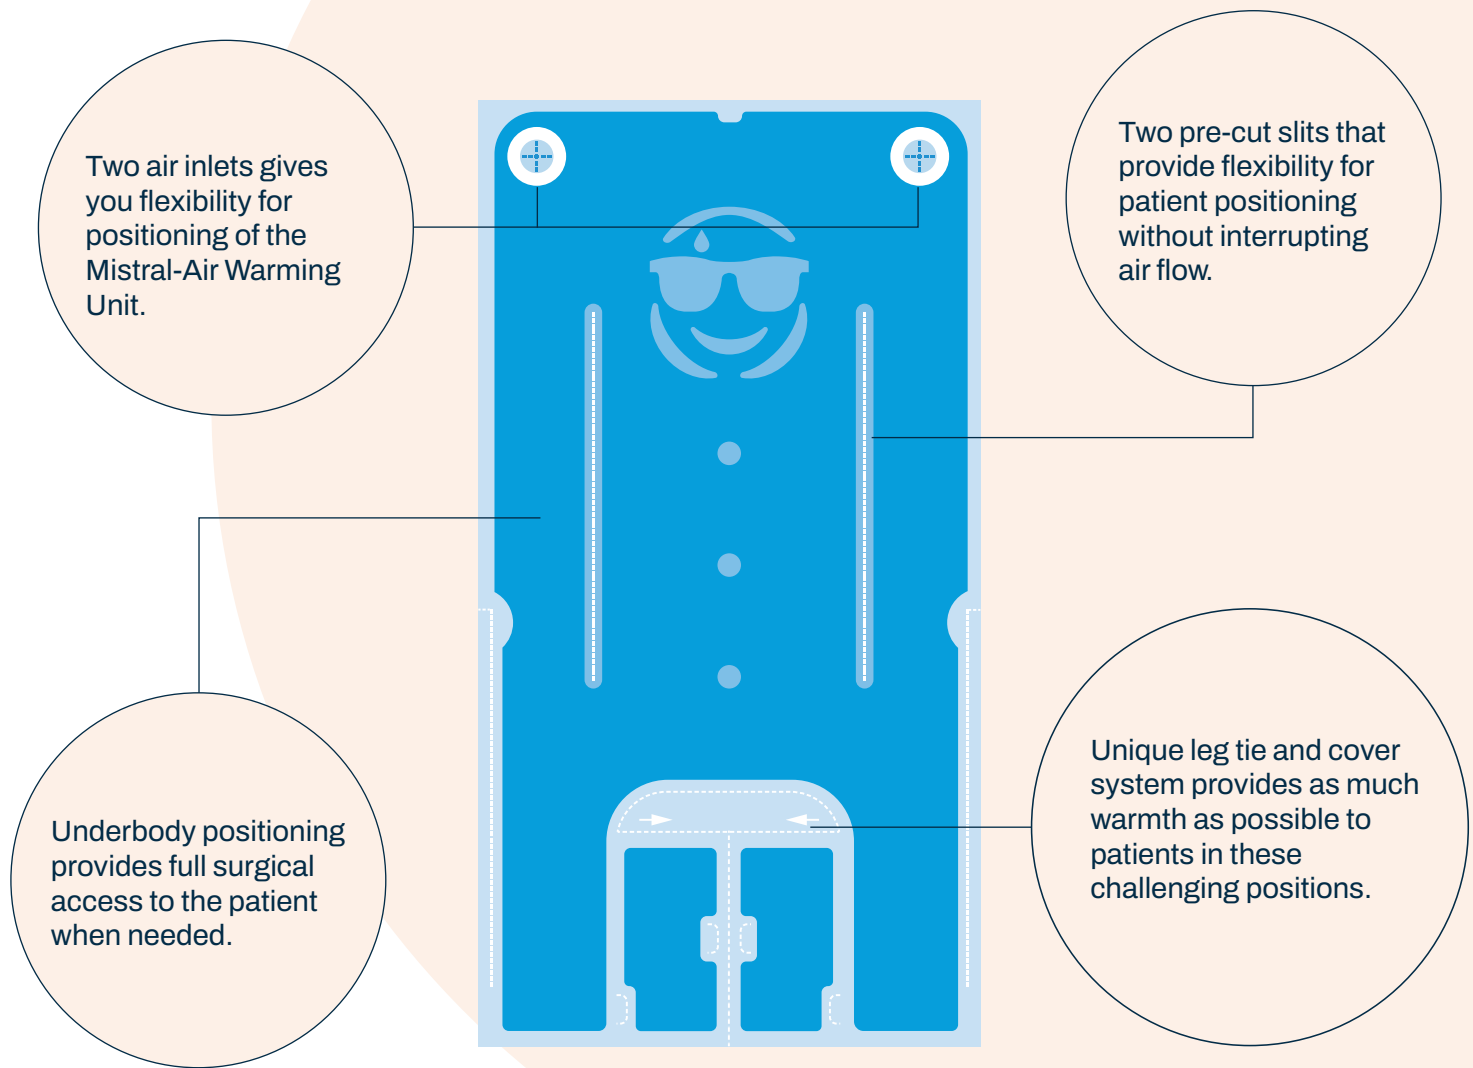

Mistral-Air is brought to you by TSC Life. We are the experts in patient temperature warming and endoscopy, focused on the everyday and future needs of both HCPs and their patients.
